EDUCATION

Global Academy of Technology — **Bangalore, India**
Bachelor of Engineering, Artificial Intelligence and Machine Learning — *Expected June 2027*

PROFESSIONAL EXPERIENCE

AI Engineer Intern (Tech Lead) | Beagle Corporation — *May 2026 – October 2026*

- **Co-led** a five-person engineering team delivering 48 production serverless AI functions, autonomous agents, and automated workflows across Nissan, Vice, Whittier Trust, and enterprise legal and travel engagements.
- **Developed** and hardened multi-tenant dlt collectors for X and Ahrefs, implementing tenant/account isolation, MotherDuck destinations, merge-key correctness, load auditing, failure diagnostics, and credential-safe live testing against the repository's GA4 conformance standard.
- **Configured** and refined multi-agent pipelines and visual orchestration workflows, resolving tool-discovery, JSON field-mapping, repeated-generation, and wrapped-output failures by implementing plain-tool event support, single-iteration agent execution, and explicit per-field wiring.
- **Built** and deployed Whittier Trust's deterministic email assembly layer, including locked templates, validation, CRM-ready rendering, security hardening, and end-to-end integration with the automated email agent and production workflow.
- **Coordinated** cross-pod delivery with product and platform teams, translating test findings into architecture decisions while explicitly managing dependencies involving client credentials, database schemas, MotherDuck permissions, deployment ownership, and serverless runtime constraints.

Technologies: Python, JavaScript, MCP, Serverless FaaS, MotherDuck (DuckDB), dlt, REST APIs, agent/workflow orchestration, GitHub Actions, pytest.

PROJECTS

Asta — AI-Powered SME GST & Compliance Co-Pilot — GitHub

- **Architected** an end-to-end GST compliance and financial intelligence platform using PyMuPDF and Tesseract OCR to ingest multi-format B2B/export invoices, perform deterministic 15-digit GSTIN/HSN validation, and compute a real-time 0–100 Compliance Health Score.
- **Engineered** a multi-agent compliance co-pilot (MetaOrchestrator) combining Gemini tool-calling with pgvector semantic retrieval over GST statutes to automate invoice reconciliation, ITC mismatch detection, and statutory obligation tracking.
- **Integrated** GST Suvidha Provider (GSP) APIs for automated GSTIN/PAN verification and human-in-the-loop GSTR-1 return payload generation, validating intra/inter-state tax splits (CGST/SGST vs. IGST) with 100% deterministic schema compliance under 1.8 s per invoice.

Technologies: Python, FastAPI, Google Gemini, PostgreSQL, pgvector, GSP APIs, PyMuPDF, Tesseract OCR, React, TypeScript, Docker

ProductionRAG — Hybrid Retrieval-Augmented Generation Platform — GitHub

- **Architected** a production-grade RAG pipeline leveraging variable-size chunking and batch ingestion workflows to index multi-format documents via Google GenAI embeddings into ChromaDB.
- **Engineered** a two-stage hybrid retrieval engine pairing BM25 lexical search with dense vector similarity, integrated with Cohere cross-encoder reranking to achieve sub-450 ms retrieval latency while improving top-k retrieval accuracy by ~28%.
- **Benchmarked** pipeline performance against a golden evaluation dataset utilizing the RAGAS framework, quantitatively reaching >91% faithfulness, 89% answer relevancy, and >88% context precision.

Technologies: Python, FastAPI, LangChain, ChromaDB, Cohere Rerank, Google Gemini, React, TypeScript, RAGAS

AWARDS & HACKATHONS

- **Winner — Best Final-Year Project Award (2026):** Awarded Best Project at Global Academy of Technology for *Asta*, an AI-powered SME GST compliance and GSTR-1 filing co-pilot.
- **2nd Place — EcoQuest Hackathon:** Engineered an automated carbon footprint tracking application in 24 hours using Python and React, parsing receipt data to compute real-time emissions for 200+ users.

SKILLS

- **Programming Languages**: Python, TypeScript, JavaScript, Java, SQL, C/C++
- **AI Engineering Tools & Frameworks**: FastAPI, LangChain, LangGraph, PyTorch, HuggingFace, Cohere Rerank, RAGAS, Agent SDKs, n8n Workflows
- **Data Engineering & Databases**: MotherDuck, DuckDB, PostgreSQL (pgvector), dlt, ChromaDB, Qdrant, MongoDB
- **DevOps, Cloud & Tools**: Docker, Model Context Protocol (MCP), React, Git/GitHub, GitHub Actions, Pytest, AWS, Linux
