P PRITHVI RAJ KANDAN

+91 9591747936 | prithvirajkandan@gmail.com | LinkedIn | GitHub | Bengaluru, India

EDUCATION

Global Academy of Technology — **Bangalore, India**
Bachelor of Engineering, Artificial Intelligence and Machine Learning — *Expected June 2027*

PROFESSIONAL EXPERIENCE

AI Engineer Intern (Tech Lead) | Beagle Corporation — *May 2026 – October 2026*

- **Co-led** a five-person engineering team delivering 48 CortexOne functions, agents, and workflows across Nissan, TravelAgency, Whittier Trust, Kia, and legal research projects.
- **Developed** and hardened multi-tenant dlt collectors for X and Ahrefs, implementing tenant/account isolation, MotherDuck destinations, merge-key correctness, load auditing, failure diagnostics, and credential-safe live testing against the repository's GA4 conformance standard.
- **Configured** and refined CortexOne agents and visual workflows, resolving tool-discovery, JSON field-mapping, repeated-generation, and wrapped-output failures by implementing plain-tool event support, single-iteration agent execution, and explicit per-field wiring.
- **Built** and deployed Whittier Trust's deterministic email assembly layer, including locked templates, validation, CRM-ready rendering, security hardening, and integration with the CortexOne Email Agent and Email Production Workflow.
- **Coordinated** cross-pod delivery with product and platform teams, translating test findings into architecture decisions while explicitly managing dependencies involving client credentials, database schemas, MotherDuck permissions, deployment ownership, and CortexOne resource constraints.

Technologies: Python, JavaScript, MCP, CortexOne/Rival FaaS, MotherDuck (DuckDB), dlt, REST APIs, agent/workflow orchestration, GitHub Actions, pytest.

PROJECTS

ProductionRAG — Hybrid Retrieval-Augmented Generation Platform

- **Architected** a production-grade RAG pipeline leveraging variable-size chunking and batch ingestion workflows to index multi-format documents via Google GenAI embeddings into ChromaDB.
- **Engineered** a two-stage hybrid retrieval engine pairing BM25 lexical search with dense vector similarity, integrated with Cohere cross-encoder reranking to achieve sub-450 ms retrieval latency while improving top-k retrieval accuracy by ~28%.
- **Benchmarked** pipeline performance against a golden evaluation dataset utilizing the RAGAS framework, quantitatively reaching >91% faithfulness, 89% answer relevancy, and >88% context precision.

Technologies: Python, FastAPI, LangChain, ChromaDB, Cohere Rerank, Google Gemini, React, TypeScript, RAGAS

LogGuard — AI-Powered Security Log Intelligence & Threat Classification Engine

- **Engineered** an automated log analysis pipeline parsing multi-format unstructured files (.log, .docx, .txt, .pdf) under 1.2 s per megabyte to detect critical vulnerabilities and system anomalies.
- **Built** a multi-tier threat classification pipeline combining regex pattern extraction with rule-based heuristics, categorizing incidents into Critical, High, Medium, and Low severities with 94%+ classification accuracy.
- **Integrated** Gemini 2.5 Flash via FastAPI to stream root-cause vulnerability summaries and power real-time conversational querying with sub-800 ms time-to-first-token (TTFT).

Technologies: Python, FastAPI, Google Gemini 2.5 Flash, React, TypeScript, Tailwind CSS, Pytest, RESTful APIs

HACKATHONS

- **2nd Place — EcoQuest Hackathon:** Engineered an automated carbon footprint tracking application in 24 hours using python and React, parsing receipt data to compute real-time emissions for 200+ users.

SKILLS

- **Programming Languages**: Python, Java, JavaScript, SQL, C/C++
- **AI Engineering tools/frameworks**: FastAPI, Langchain, Pytorch, HuggingFace, CUDA, Agent SDK's, n8n workflows
- **Data Engineering & Databases**: MotherDuck, DuckDB, PostgreSQL, MongoDB, Qdrant, ChromaDB
- **DevOps, Cloud & Tools**: Docker, Model Context Protocol (MCP), Git/GitHub, AWS, Azure, Railway, Heroku
